

Apache .htaccess file example

block http access to the sqlite DB file by default

```
<Files "sshfail2kml.sqlite">
```

```
    Order allow,deny
```

```
    Deny from all
```

```
</Files>
```

block http access to the json file by default, could be handy to open this so you can use it from other servers

```
<Files "sshfail2kml.json">
```

```
    Order allow,deny
```

```
    Deny from all
```

```
</Files>
```

if mod_expires is enabled lets set kml and json files to expire in only 1 minute

```
<IfModule mod_expires.c>
```

```
  <Filesmatch "\.(|json|kml)$">
```

```
    ExpiresActive On
```

```
    ExpiresDefault "access plus 1 minute"
```

```
  </Filesmatch>
```

```
</IfModule>
```
