

RewriteEngine On

```
## Note: If you are installing Hazard system via Apache's "Alias"  
## configuration rather than plain subdirectory, then you need to  
## uncomment the "RewriteBase" line and *change it to your URI alias path*  
## or you'll get a nonsensical HTTP 400 Bad Request error.  
## See: http://httpd.apache.org/docs/current/mod/mod\_rewrite.html#rewritebase  
##  
## For example, from Apache configuration:  
## Alias /hazard "C:/prog/hazardproject"  
## the RewriteBase line will be  
## RewriteBase /hazard/  
##  
# RewriteBase /hazard/
