

This is the .htaccess file for the FrankJunior API's directory.

*# Using the RewriteEngine, we will catch all request for this
directory or anything in it, and rewrite them as requests for
index.php. The original request path will be passed to index.php
in a query string variable named q.*

RewriteEngine On

Rewrite requests for the API directory itself:

RewriteRule ^\$ index.php?q=/ [L]

*# Rewrite requests for all other paths, unless the requested path is a real directory or
file:*

RewriteCond %{REQUEST_FILENAME} !-d

RewriteCond %{REQUEST_FILENAME} !-f

RewriteRule (.*) index.php?q=/\$1 [L]

*# Note: In the <Directory> and .htaccess contexts, the RewriteEngine
only sees the part of the request path that is after the prefix
that lead the server to the current RewriteRule. That's why we
hardcode the leading / into the query string.*
