

```
DirectoryIndex app.php
#DirectoryIndex app_dev.php

<IfModule mod_rewrite.c>
    RewriteEngine On

    # Redirect to URI without front controller to prevent duplicate content
    # (with and without '/app.php'). Only do this redirect on the initial
    # rewrite by Apache and not on subsequent cycles. Otherwise we would get an
    # endless redirect loop (request -> rewrite to front controller ->
    # redirect -> request -> ...).

    # So in case you get a "too many redirects" error or you always get redirected
    # to the startpage because your Apache does not expose the REDIRECT_STATUS
    # environment variable, you have 2 choices:
    # - disable this feature by commenting the following 2 lines or
    # - use Apache >= 2.3.9 and replace all L flags by END flags and remove the
    #   following RewriteCond (best solution)
    RewriteCond %{ENV:REDIRECT_STATUS} ^$ 
    #RewriteRule ^app_dev\.php(/(.*)|$) %{CONTEXT_PREFIX}/$2 [R=301,L]
    RewriteRule ^app\.php(/(.*)|$) %{CONTEXT_PREFIX}/$2 [R=301,L]

    # If the requested filename exists, simply serve it.
    # We only want to let Apache serve files and not directories.
    RewriteCond %{REQUEST_FILENAME} -f
    RewriteRule .? - [L]

    RewriteCond %{REQUEST_FILENAME} -f
    # RewriteRule ^(.*)$ app_dev.php [QSA,L]
    RewriteRule ^(.*)$ app.php [QSA,L]

    # The following rewrites all other queries to the front controller. The
    # condition ensures that if you are using Apache aliases to do mass virtual
    # hosting, the base path will be prepended to allow proper resolution of the
    # app.php file; it will work in non-aliased environments as well, providing
    # a safe, one-size fits all solution.
    RewriteCond %{REQUEST_URI} :$1 ^(/.+)(.+)\$2$
    RewriteRule .? - [E=BASE: %1]
    #RewriteRule .? %{ENV: BASE}app_dev.php [L]

    RewriteRule .? %{ENV: BASE}app.php [L]
```

```
</IfModule>
