```

```
# X-Xss-Protection
```

```
# This header is used to configure the built in reflective XSS protection found in  
Internet Explorer, Chrome and Safari (Webkit).
```

```
#Header set X-XSS-Protection "1; mode=block"
```

```
# X-Frame-Options
```

```
# The X-Frame-Options header (RFC), or XFO header, protects your visitors against
```

clickjacking attacks

Already set by php code! Do not activate both options

#Header set X-Frame-Options SAMEORIGIN

X-Content-Type-Options

It prevents Google Chrome and Internet Explorer from trying to mime-sniff the content-type of a response away from the one being declared by the server.

#Header set X-Content-Type-Options: "nosniff"

CSP - Content Security Policy

for better privacy/security ask browsers to not set the Referer

more flags for script, stylesheets and images available, read RFC for more information

#Header set Content-Security-Policy "referrer no-referrer"

</IfModule>
