

```
##  
# This Apache rewrite file is to remove the need for everything to explicitly  
# run through rest.cfm for much cleaner URLs.  Instead of:  
#  
#     http://localhost/rest.cfm/resource.xml  
#  
# this rewrite allows us to drop the "rest.cfm" part as follows:  
#  
#     http://localhost/resource.xml  
#
```

```
RewriteEngine on  
RewriteCond %{REQUEST_FILENAME} !-f  
RewriteRule ([a-z]{1}, *)?$ rest.cfm/$1 [QSA,L]
```
