# On some specific Linux installations you could face problems with Firefox.  
# It could give you errors when loading the editor saying that some illegal  
# characters were found (three strange chars in the beginning of the file).  
# This could happen if you map the .js or .css files to PHP, for example.  
  
#  
# Those characters are the Byte Order Mask (BOM) of the Unicode encoded files.  
# All FCKeditor files are Unicode encoded.  
  
#  
AddType application/x-javascript .js  
  
AddType text/css .css  
  
#  
  
# If PHP is mapped to handle XML files, you could have some issues. The  
# following will disable it.  
  
#  
AddType text/xml .xml
```
