```
RewriteEngine On
```

```
# The RewriteBase directive explicitly sets the base URL for per-directory  
# rewrites. Uncomment and set this command if you are having trouble with  
# the RewriteEngine (internal errors on SEF links or JavaScript files).  
#RewriteBase /
```

```
### JAVASCRIPT COMPRESSION ###
```

```
# Combine is used for JavaScript compression when debug mode is off. This line  
# should remain uncommment unless you are always in debug mode (for example on  
# development platforms).
```

```
RewriteRule ^xjs/(. *\.\ js) combine.php?files=$1
```

```
### SEF LINKS ###
```

```
# The following rules make SEF links work with XirtCMS. These lines should  
# remain uncommment unless you are not using SEF links (ever).
```

```
RewriteCond %{REQUEST_URI} !^(admin/. *)$
```

```
RewriteCond %{REQUEST_URI} (/ \.html \.php| \.html| /[\^.]*)$ [NC]
```

```
RewriteCond %{REQUEST_FILENAME} !-f
```

```
RewriteCond %{REQUEST_FILENAME} !-d
```

```
RewriteRule (. *) index.php
```

```
### ERROR DOCUMENTS ###
```

```
#ErrorDocument 404 /index.php?content=com_error
```

```
### FAVICON HOTFIX ###
```

```
# The following line rewrites the location for the favicon, as IE currently  
# does not interpret the HTML-tag as it should. This line should remain  
# uncommmented.
```

```
RewriteRule ^favicon.ico$ images/favicon.ico [L]
```

```
### WEBSITE SPEED ###
```

```
# The below can be used on live-environments to speed up your website. iIt adds  
# headers to your files that enable browsers to chache files that are not often  
# modified. In addition the removal of Etags can improve your website speed.
```

```
FileETag None
