

```
### CORS HEADERS ###
```

```
### Deprecated in favor of explicit Options Routes in RESTController.php ###
```

```
# This has to be allowed per-referer if credentials are used.
```

```
# Useful here for dev, but should be set programatically for production.
```

```
# Header add Access-Control-Allow-Origin "*"
```

```
# Again, these are useful for dev, but bad for production
```

```
# Header add Access-Control-Allow-Headers "origin, x-requested-with, content-type"
```

```
# Header add Access-Control-Allow-Methods "GET, POST, PUT, PATCH, DELETE, OPTIONS, HEAD"
```

```
# Allows for Basic auth
```

```
# Header add Access-Control-Allow-Credentials: true
```

```
# Preflight only has to be made every 24 hours per resource
```

```
# Header add Access-Control-Max-Age: 86400
```

```
### URL REWRITE TO index.php ###
```

```
# Only ever allow requests to the index page,
```

```
# No other files should ever be served by this directory.
```

```
# Assets must live on another subdomain, in another location.
```

```
RewriteEngine On
```

```
RewriteCond %{REQUEST_URI} !=/v1/index.php
```

```
RewriteRule (.*)$ index.php?url=/$1 [QSA,L]
```
