#
# This is used with Apache WebServers
#
# The following blocks direct HTTP requests to all filetypes in this directory
# recursively, except certain approved exceptions
# It also prevents the ability of any scripts to run. No type of script, be it PHP, PERL
# or whatever, can normally be executed if ExecCGI is disabled.
# Will also prevent people from seeing what is in the dir. and any sub-directories
#
# For this to work, you must include either 'All' or at least: 'Limit' and 'Indexes'
# parameters to the AllowOverride configuration in your apache/conf/httpd.conf file.
# Example:
#<Directory "/usr/local/apache/htdocs">
# AllowOverride Limit Options Indexes
#</Directory>
#####

<Limit GET POST PUT>
Order Allow,Deny
Deny from All
</Limit>

## NOBODY SHOULD BE SNOOPING IN THIS FOLDER

# deny *everything*
<FilesMatch ".*">
    Order Allow,Deny
    Deny from all
</FilesMatch>

IndexIgnore */*
```
