

```
#  
# You should not expose Eventum to web root.  
# Only htdocs directory should be exposed to webroot  
#  
# See installation documentation from wiki:  
# https://github.com/eventum/eventum/wiki/System-Admin%3A-Doing-a-fresh-install  
#  
  
# This is just workaround to redirect all requests outside /htdocs/ to /htdocs/.  
# Not perfect, but covers likely most of the cases.
```

RewriteEngine On

```
# Capture $BASE variable  
# http://stackoverflow.com/a/18589126/2314626  
RewriteCond %{REQUEST_URI}::$1 ^(/.+)/(.*)::\2$  
RewriteRule ^(.*)$ - [E=BASE:%1]  
  
# Redirect to htdocs/ if url already does not match 'htdocs'  
RewriteCond %{REQUEST_URI} !/htdocs/  
RewriteCond %{REQUEST_FILENAME} !/htdocs/  
RewriteRule ^(.*)$ %{ENV:BASE}/htdocs/$1 [R=302,L]
```
