#####  
# READ THIS COMPLETELY IF YOU CHOOSE TO USE THIS FILE  
#  
# The line just below this section: 'Options +FollowSymLinks' may cause problems  
# with some server configurations. It is required for use of mod_rewrite, but may already  
# be set by your server administrator in a way that disallows changing it in  
# your .htaccess file. If using it causes your server to error out, comment it out (add #  
to  
# beginning of line), reload your site in your browser and test your self url's. If they  
work,  
# it has been set by your server administrator and you do not need it set here.  
#
