
ErrorDocument 404 {{site.baseurl}}/404.html

turn on redirection

Options +FollowSymLinks

RewriteEngine on

NOTE:

Some of the below redirects are 302s, and some are 301s. 302s are used for redirects whose targets change sometimes. For example:

- /docs/ -> /docs/fr/, /docs/en/, etc.

- /docs/en/ -> /docs/en/edge/, /docs/en/latest/, etc.

- /docs/en/latest -> /docs/en/4.0.0/, /docs/en/5.0.0/, etc.

#

301s are for PERMANENT redirects. These are used only for mapping old docs pages to new docs pages.

#

302:

docs -> docs/en/latest/

docs/ -> docs/en/latest/

docs/XX -> docs/XX/latest/

docs/XX/ -> docs/XX/latest/

#

NOTE:

these can both apply, turning "/docs" into "/docs/en/latest/"

RewriteRule ^.*docs/\$ {{site.baseurl}}/docs/en/

RewriteRule ^.*docs/(\w\w)/\$ {{site.baseurl}}/docs/\$1/latest/ [R=302,L]

302:

docs/XX/latest -> docs/XX/latest/

RewriteRule ^.*docs/(\w\w)/latest\$ {{site.baseurl}}/docs/\$1/latest/ [R=302,L]

rewrite only:

/docs/XX/latest/* -> /docs/XX/Y.Y.Y/*

#

NOTE:

This does NOT return a redirect. It returns the resource *as if* the

redirected URI was requested. That is, both URIs return the same

resource, but the browser will change the URI (see redirects follow-up)

```
# resource, but the browser won't change the URL (no redirects followed).
RewriteRule ^.*docs/(\w\w)/latest/(.*)$
{{site.baseurl}}/docs/$1/{{site.latest_docs_version}}/$2 [L]

# 301:
# old docs pages -> new docs pages (from www/_data/docs-redirects.yml)
#
# NOTE:
# The first part of the path (i.e. the ".*") is
# thrown away and replaced by site.baseurl.
# NOTE:
# The reason for this not just being "redirects" and rather being
# docs-specific is: these redirects happen for every version of the
# docs. That's 157 redirects * 84 versions "= 13000 redirects! Doing
# special pattern-matching for docs keeps that number at _only_ 157.
{% for redirect in site.data.docs-redirects %}
RewriteRule ^.*docs/(\w\w)/([^\s]+)/{{redirect.old}}$
{{site.baseurl}}/docs/$1/$2/{{redirect.new}} [R=301,L]{% endfor %}
```
