

ErrorDocument 404 /404.html

*# Following is from <https://wiki.apache.org/httpd/RewriteHTTPToHTTPS>*

RewriteEngine On

*# This will enable the Rewrite capabilities*

RewriteCond %{HTTPS} !=on

*# This checks to make sure the connection is not already HTTPS*

RewriteRule ^/?(.\*) https://%(SERVER\_NAME)/\$1 [R,L]

*# This rule will redirect users from their original location, to the same location but using HTTPS.*

*# i. e. http://www.example.com/foo/ to https://www.example.com/foo/*

*# The leading slash is made optional so that this will work either in httpd.conf*

*# or .htaccess context*

*#Gzip*
