

```
# this will make register_globals off in b2's directory  
# just put a '#' sign before these three lines if you don't want that
```

```
<IfModule mod_php4.c>  
    php_flag register_globals off  
</IfModule>
```

```
# this will set the error_reporting level to remove 'Notices'
```

```
<IfModule mod_php4.c>  
    php_value error_reporting 247  
</IfModule>
```

```
# this is used to make b2 produce links like http://example.com/archives/m/200209  
# if you renamed the file 'archives' to another name, please change it here too
```

```
<Files archives>  
    ForceType application/x-httpd-php  
</Files>
```
