

The concept for this was taken from the Drupal project by D. Keith Casey Jr. - caseydk@

PHP 4, Apache 1

```
<IfModule mod_php4.c>
    php_value magic_quotes_gpc          0
    php_value register_globals          0
    php_value allow_url_fopen          0
    php_value session.auto_start       0
    php_value max_execution_time      120
    php_value zlib.output_compression 0
</IfModule>
```

PHP 4, Apache 2

```
<IfModule sapi_apache2.c>
    php_value magic_quotes_gpc          0
    php_value register_globals          0
    php_value allow_url_fopen          0
    php_value session.auto_start       0
    php_value max_execution_time      120
    php_value zlib.output_compression 0
</IfModule>
```

PHP 5, Apache 1 and 2

```
<IfModule mod_php5.c>
    php_value magic_quotes_gpc          0
    php_value register_globals          0
    php_value allow_url_fopen          0
    php_value session.auto_start       0
    php_value max_execution_time      120
    php_value zlib.output_compression 0
</IfModule>
```

Protect files and directories from prying eyes:

- These limitations were put in place specifically to combat further security issues in a
close out previous issues. In order to install some modules - such as the Task Tracker
have to be manually added to the second FileMatch block in order to allow for external .

```
<FilesMatch "\.(classes|db|files|functions|includes|lib|locales|misc|modules|theme|CVS|.|svr
Order deny,allow
Deny from all
#END-SECURITY
```

```
</filesMatch>
<FilesMatch "^(index.php|calendar.php|queuescanner.php|fileviewer.php|updatecontact.php|do_updatecontact.php)$">
    Order deny,allow
    Allow from all
</FilesMatch>

# Set some options.
Options -Indexes
Options +FollowSymLinks

# Set the default handler.
DirectoryIndex index.php
```
