# replace 'append' with 'merge' for Apache version 2.2.9 and later
#Header append Cache-Control public env!=NO_CACHE

# Optional security header
# Only increased security if the browser support those features
# Be careful! Testing is required! They should be adusted to your intallation / user environment

# HSTS - HTTP Strict Transport Security
#Header always set Strict-Transport-Security "max-age=31536000; preload" env=HTTPS

# HPKP - HTTP Public Key Pinning
# Only template - fill with your values
#Header always set Public-Key-Pins "max-age=3600; report-uri=''; pin-sha256=''; pin-sha256=''" env=HTTPS

# X-Xss-Protection
# This header is used to configure the built in reflective XSS protection found in Internet Explorer, Chrome and Safari (Webkit).
#Header set X-XSS-Protection "1; mode=block"

# X-Frame-Options
# The X-Frame-Options header (RFC), or XFO header, protects your visitors against clickjacking attacks
# Already set by php code! Do not activate both options
#Header set X-Frame-Options SAMEORIGIN
```

```
# X-Content-Type-Options
# It prevents Google Chrome and Internet Explorer from trying to mime-sniff the content-
# type of a response away from the one being declared by the server.
#Header set X-Content-Type-Options: "nosniff"

# CSP - Content Security Policy
# for better privacy/security ask browsers to not set the Referer
# more flags for script, stylesheets and images available, read RFC for more information
#Header set Content-Security-Policy "referrer no-referrer"
