

```
# $Id: .htaccess,v 1.1 2005/05/21 21:38:58 ehoo Exp $  
# .htaccess file for browsing source via Apache HTTP server.  
# Main purpose of this file is to undo any configurations at the  
# server level that will cause files to be interpreted as  
# (CGI) programs. Of course, this file is pointless if .htaccess  
# is disabled at the server config level.
