

Turn on the Rewrite Engine

RewriteEngine On

If you're running in a subfolder (like http://example.com/statamic),

add that here. E.g. /statamic/

RewriteBase /

Protect your system files from prying eyes

RewriteRule ^(_app) - [F,L]

RewriteRule ^(_config) - [F,L]

RewriteRule ^(_content) - [F,L]

RewriteRule ^(_logs) - [F,L]

RewriteRule ^(admin/themes/[^/]*/(?:layouts|templates)) - [F,L]

RewriteRule ^(.*)?\.(yml)\$ - [F,L]

RewriteRule ^(.*)?\.(yaml)\$ - [F,L]

RewriteRule ^(.*/)?\.(git+)\$ - [F,L]

This will prevent all .html files from being accessed.

You may want to remove this line if you want to serve

static files outside of Statamic

RewriteRule ^(.*)?\.(html)\$ - [F,L]

Remove trailing slashes from your URL

RewriteCond %{REQUEST_FILENAME} !-d

RewriteRule ^(.*)\(/(?:.*)?\$ \$1\$2 [R=301,L]

Remove the index.php

RewriteCond %{REQUEST_FILENAME} !-f

RewriteCond %{REQUEST_FILENAME} !-d

RewriteRule ^(.*)\$ index.php [QSA,L]
