```
# Website Maintenance Mode for Apache Servers
# Uncomment all lines from <IfModule mod_rewrite.c> and including </IfModule> to activate.
# Re-comment those lines with a # to turn off maintenance mode)

# NOTE:  You must update REMOTE_ADDR with your current IP address to view changes and
preform testing.
# Depending on whether you have IPv4 or IPv6 you will only need to un-comment and change
one of the lines.
# IPv4 will have !^ infront the IP address followed by back slashes.
# IPv6 only requires the IP address itself.

#<IfModule mod_rewrite.c>
 #RewriteEngine on
 #### Note:  If your computer uses an IPv4 address.  Only uncomment the line below.  ####
 #RewriteCond %{REMOTE_ADDR} !^255\.255\.255\.255$
 #### Note:  If your computer uses an IPv6 address.  Only uncomment the line below.  ####
 #RewriteCond %{REMOTE_ADDR} !^0000:0000:0000:0000:0000:0000:0000:0000
 #RewriteCond %{REQUEST_URI} !/maintenance.html$ [NC]
 #RewriteCond %{REQUEST_URI} !\.(jpe?g?|png|gif|svg|css|js) [NC]
 #RewriteRule .* /maintenance.html [R=302,L]
#</IfModule>
