###
## Zula Framework .htaccess file
###

### Override some PHP settings that can't be done at runtime
<IfModule mod_php5.c>
    php_flag magic_quotes_gpc    off
    php_flag register_globals    off
</IfModule>

### Rewrite Rules, used with 'SEF' routers
<IfModule mod_rewrite.c>
    RewriteEngine on

    # The following RewriteBase needs changing if Zula Framework
    # is running within a subdirectory (can also be the cause of
    # 500/Internal Server Errors).
    #
    # e.g. running in a subdir of /zula-framework use the following:
    # RewriteBase /zula-framework
    #
    #RewriteBase /

    RewriteCond %{SCRIPT_FILENAME} !-d
    RewriteCond %{SCRIPT_FILENAME} !-f
    RewriteRule ^(.*)$ index.php?url=$1 [QSA]
</IfModule>

### Stop people accessing various directories
<IfModule mod_alias.c>
    # If running in a subdirectory you will need to change "^/" to
    # "^/subdirectory/"
    #
    # e.g. running in subdir of /zula-framework:
    # RedirectMatch 403 ^/zula-framework/tmp/js?$
    #
    RedirectMatch 403 ^/application/(?! (modules/. */assets/?))
    RedirectMatch 403 ^/assets/uploads/media/(?! (wm\. png|wm_thumb\. png))
    RedirectMatch 403 ^/config/. */?
    RedirectMatch 403 ^/tmp/(?! (cache|media|system|uploader))/?
    RedirectMatch 403 ^/tmp/.*$

```

RedirectMatch 403 /tmp/js/.*\$

</IfModule>
