```
##
## Zula Framework .htaccess file
##

### Rewrite Rules, used with 'SEF' routers
<IfModule mod_rewrite.c>
    RewriteEngine on

    # The following RewriteBase needs changing if Zula Framework
    # is running within a subdirectory (can also be the cause of
    # 500/Internal Server Errors).
    #
    # This file should have its RewriteBase suffixed with /setup
    #
    # e.g. running in a subdir of /zula-framework use the following:
    # RewriteBase /zula-framework/setup
    #
    #RewriteBase /setup

    RewriteCond %{SCRIPT_FILENAME} !-f
    RewriteCond %{SCRIPT_FILENAME} !-d [OR]
    RewriteCond %{REQUEST_URI} !/install/security$
    RewriteCond %{REQUEST_URI} !/upgrade/version$
    RewriteRule ^(.*)$ index.php?url=$1 [QSA]
</IfModule>
