

Don't show directory listings for URLs which map to a directory.

`Options -Indexes`

Follow symbolic links in this directory.

`Options +FollowSymLinks`

Set the default handler.

`DirectoryIndex index.php`

Beauty URLs

If your server does not support this feature, you should edit the beautyurls boolean in the settings.php file so it says false instead of true.

Please note that this is a standard feature for most shared hosting services.

`<IfModule mod_rewrite.c>`

`RewriteEngine On`

`RewriteRule ^index.html$ index.php [L, QSA]`

Any attempt to access PHP files in the system directory will cause a 404 error page to show up. Good disguise but not good security on its own.

`RewriteRule ^system/*.php$ index.php?q=404 [L, QSA]`

`RewriteCond %{REQUEST_FILENAME} !-f`

`RewriteRule ^(.*)$ index.php?q=$1 [L, QSA]`

`</IfModule>`
