

*# Use the front controller as index file. It serves as a fallback solution when  
# every other rewrite/redirect fails (e.g. in an aliased environment without  
# mod\_rewrite). Additionally, this reduces the matching process for the  
# start page (path "/") because otherwise Apache will apply the rewriting rules  
# to each configured DirectoryIndex file (e.g. index.php, index.html, index.pl).*

```
<IfModule mod_rewrite.c>  
    RewriteEngine On  
    Options +FollowSymLinks  
  
    RewriteRule ^app_dev.php - [L]  
  
    RewriteCond %{REQUEST_FILENAME} !-f  
    RewriteRule ^(.*)$ /app_dev.php [QSA,L]  
  
</IfModule>
```
