

If you use Apache 2.2.16 or higher, you can use the FallbackResource directive

`FallbackResource /index.php`

Otherwise you need to use mod_rewrite. Just uncomment the following lines

`# <IfModule mod_rewrite.c>`

`# Options -MultiViews`

`#`

`# RewriteEngine On`

`# #RewriteBase /path/to/app`

`# RewriteCond %{REQUEST_FILENAME} !-f`

`# RewriteRule ^ index.php [L]`

`# </IfModule>`
