#

# This is used with Apache WebServers

#

# The following blocks direct HTTP requests to all filetypes in this directory
recursively, except certain approved exceptions

# It also prevents the ability of any scripts to run. No type of script, be it PHP, PERL
or whatever, can normally be executed if ExecCGI is disabled.

# Will also prevent people from seeing what is in the dir. and any sub-directories

#

# For this to work, you must include either 'All' or at least: 'Limit' and 'Indexes'
parameters to the AllowOverride configuration in your apache/conf/httpd.conf file.

# Additionally, if you want the added protection offered by the OPTIONS directive below,
you'll need to add 'Options' to the AllowOverride list, if 'All' is not specified.

# Example:

#<Directory "/usr/local/apache/htdocs">

#  AllowOverride Limit Options Indexes

#</Directory>

################################

# deny .yourauthinc
```

```
# deny *everything*

<FilesMatch ".*">

  Order Allow,Deny

  Deny from all

</FilesMatch>

# but now allow just *certain* necessary files:

<FilesMatch ".*\.(js|JS|css|CSS|jpg|JPG|gif|GIF|png|PNG|swf|SWF|xsl|XSL)$">

  Order Allow,Deny

  Allow from all

</FilesMatch>

IndexIgnore */*

## NOTE: If you want even greater security to prevent hackers from running scripts in this
folder, uncomment the following line (if your hosting company will allow you to use
OPTIONS):

# OPTIONS -Indexes -ExecCGI
```
