##
# READ THIS COMPLETELY IF YOU CHOOSE TO USE THIS FILE!
#
# The line just below this section: 'Options +FollowSymLinks' may cause problems
# with some server configurations. It is required for use of mod_rewrite, but may
already
# be set by your server administrator in a way that disallows changing it in
# your .htaccess file. If using it causes your server to error out, comment it out
(add # to
# beginning of line), reload your site in your browser and test your self url's. If
they work,
# it has been set by your server administrator and you do not need it set here.
#

## Can be commented out if causes errors, see notes above.
Options +FollowSymLinks

## Mod_rewrite in use.
RewriteEngine On

##
# Begin - Rewrite rules to block out some common exploits.
# If you experience problems on your site block out the operations listed below
# This attempts to block the most common type of exploit 'attempts' to M2 Micro
Framework
#
# Block out any script trying to base64_encode data within the URL.
RewriteCond %{QUERY_STRING} base64_encode(?:[*^\(]\*\([^\)]*\)) [OR]
# Block out any script that includes a <script> tag in URL.
RewriteCond %{QUERY_STRING} (<|%)3C(?:[^\s]*s)+cript.*(>|%)3E [NC,OR]
# Block out any script trying to set a PHP GLOBALS variable via URL.
RewriteCond %{QUERY_STRING} GLOBALS(=| \[| \[0-9A-Z]{0,2}) [OR]
# Block out any script trying to modify a _REQUEST variable via URL.
RewriteCond %{QUERY_STRING} _REQUEST(=| \[| \[0-9A-Z]{0,2})
# Return 403 Forbidden header and show the content of the root homepage
RewriteRule .* index.php [F]
..

```

```
#

## Begin - Custom redirects
#
# If you need to redirect some pages, or set a canonical non-www to
# www redirect (or vice versa), place that code here. Ensure those
# redirects use the correct RewriteRule syntax and the [R=301,L] flags.
#

##
# Uncomment following line if your webserver's URL
# is not directly related to physical file paths.
# RewriteBase /

##
# M2 Micro Framework core SEF Section.
#
RewriteRule .* - [E=HTTP_AUTHORIZATION:%{HTTP:Authorization}]

# Add watermark to gallery images
RewriteCond %{REQUEST_URI} content/gallery/fullhd/(.*) [NC]
RewriteRule ^(.*)$ watermark.php [NC]

# If the requested path and file is not /index.php and the request
# has not already been internally rewritten to the index.php script
RewriteCond %{REQUEST_URI} !^/index\.php

# And the requested path and file doesn't directly match a physical file
RewriteCond %{REQUEST_FILENAME} !-f

# And the requested path and file doesn't directly match a physical folder
RewriteCond %{REQUEST_FILENAME} !-d

# Internally rewrite the request to the index.php script
RewriteRule .* index.php [L]
```
