

```
# $Id$
#
# This is used with Apache WebServers
# The following blocks direct HTTP requests in this directory recursively
#
# For this to work, you must include the parameter 'Limit' to the AllowOverride
configuration
#
# Example:
#
#<Directory "/usr/local/apache/htdocs">
# AllowOverride Limit
#
# 'All' will also work. (This configuration is in your apache/conf/httpd.conf file)
#
# This does not affect PHP include/require functions
#
# Example: http://server/catalog/admin/backups/backup.sql will not work
```
