

```
# http://httpd.apache.org/docs/current/mod/core.html#errordocument
#Following needs an absolutepath which I don't want to use.
#ErrorDocument 404 /rasmus/bt/oop/Alex-base/webroot/404.php
#ErrorDocument 404 "This is a Alex 404. Document is not here."
```

```
#copy: the following is copied from stackoverflow. It allows
#me to give a relative address to the 404 file so that Alex
#will hopefully work on the BTH-server without reconfiguration.
```

```
RewriteEngine on
```

```
#if requested resource isn't a file
```

```
# and isn't a directory
```

```
# then serve local error script
```

```
RewriteCond %{REQUEST_FILENAME} !-f
```

```
RewriteCond %{REQUEST_FILENAME} !-d
```

```
RewriteRule .* 404.php [L]
```

```
