

```
#  
# Apache/PHP/Drupal settings:  
#  
# The core Drupal .htaccess file was modified to allow access to .info files  
# so that our domain names that end in .info can be found.  
#  
# Since that was done we have to protect all other .info files in Drupal's  
# sites, profiles, modules, and themes directories.  
#  
  
# Protect files and directories from prying eyes.  
<FilesMatch "\.info$">  
  Order allow,deny  
</FilesMatch>
```
