

```
#
# These rules allow routing and human friendly urls! Check out the RewriteBase
# entry below and make sure it works for your system.
#

<IfModule mod_rewrite.c>
RewriteEngine On

#
# Update the RewriteBase to the relative path where TestKit is installed.
# For example, if TestKit is installed in:
#
#     /home/user/public_html/foo/bar/testkit
#
# and that path is accessible via:
#
#     http://www.domain.com/~user/foo/bar/testkit, then
#
# the RewriteBase would be:
#
#     RewriteBase ~/foo/bar/testkit
RewriteBase /testkit

RewriteCond %{REQUEST_FILENAME} !-f
RewriteCond %{REQUEST_FILENAME} !-d
RewriteRule . index.php [L]
</IfModule>

#
# Prevent file browsing. Enable this to disable file browsing of the TestKit
# directory structure. This is disabled by default as some hosts do not allow
# overriding this in .htaccess. Enable it if you can!
#
#Options -Indexes
