

```
# If you want to enable F0AF-SSL, uncommenting the following lines  
# should work. If not, please read  
# http://foaf.me/Enabling_SSL_Client_Certificates_on_Apache.php
```

```
SSLVerifyClient optional_no_ca  
SSLVerifyDepth 1  
SSLOptions +StdEnvVars  
SSLOptions +ExportCertData
```

```
# If you don't want basic HTTP authentication, comment the following  
# lines. Otherwise, uncomment them and create a corresponding .htpasswd file,  
# containing login:pass  
# See http://www.htaccess-tools.com/htpasswd-generator/ for generation  
# Or use the example auth/.htpasswd provided for user admin and password admin
```

```
#AuthUserFile /path/to/.htpasswd  
#AuthGroupFile /dev/null  
#AuthName "Restricted area!"  
#AuthType Basic  
<Limit GET>  
#require valid-user  
</Limit>
```
