

#Input your htaccess info here

#Do not forget to make sure .htaccess and mod_rewrite is enabled on your apache server.

```
<IfModule mod_rewrite.c>
```

```
RewriteEngine on
```

Remember to change rewritebase to relative path from you current root

```
RewriteBase /metal-pet
```

#excluding src files from rewriting

```
RewriteRule \.(css|js|jpg|jpeg|png|gif|eot|ttf|svg|woff)$ - [L]
```

```
RewriteRule ^(src)/ - [L]
```

```
###
```

```
#####
```

```
#
```

The following rules rewrites like this:

```
#
```

Rewritebase/home/is/here/

to

Rewritebase/index.php?p=home&p1=is&p2=here

```
#
```

Rewritebase/index.php then handles page-requests (As a front controller).

Should work with or without trailing slash

```
#####
```

```
RewriteRule ^(.*)/(.*)/(.*)/(.)*?$ index.php?p=$1&p1=$2&p2=$3 [L]
```

```
RewriteRule ^([\^/d]+)/([\^/d]+)/([\^/d]+)/?$ index.php?p=$1&p1=$2&p2=$3 [L]
```

```
RewriteRule ^(.*)/(.*)/(.)*?$ index.php?p=$1&p1=$2 [L]
```

```
RewriteRule ^(.*)/(.)*?$ index.php?p=$1 [L]
```

```
RewriteRule ^([\^/d]+)/?$ index.php?p=$1 [L]
```

```
RewriteRule ^([\^/d]+)/(.*)/?$ index.php?p=$1&p1=$2 [L]
```

```
</IfModule>
```
