```
#these are exmple options for tellmatic
#all options are disabled by default!
# please remove the # sign in fron of a rule to make it active!
#they are not enabled by default because they may make trouble in some systems, also you
may need additional permissions from your webhoster to use some features of .htaccess

#for security reasons deny access to .sql files
#<Files ~ "\.(incl sql|inc.php)$">
# order allow,deny
#deny from all
#ErrorDocument 401 default

#multpile php versions?
#if your server supports multiple php verseions, like php4+5, you may need to enable this
line to force the usage of php5 for .php extension
#i saw this on some hosts which supports php3+4+5 in different versions and by default
.php belongs to very old php3 for some reasons...
#to force usage of php5 with .php extension:
#AddType application/x-httpd-php5 .php

#deprecated! no more needed for tellmatic, we do no more use http auth method but sessions
with php

#php cgi workaround
#only needed for some misconfigured php cgi/fcgi installations
#is php running as cgi? so http auth via php will not work on most providers due to
misconfiguration!
#rewrite engine must be enabled ...
#<IfModule mod_rewrite.c>
#RewriteEngine on
#RewriteRule .* - [E=HTTP_AUTHORIZATION: %{HTTP: Authorization},L]
#</IfModule>

#if you want to know more about using .htaccess, there is a very good howto at:
http://www.htpasswdgenerator.com/apache/htaccess.html
#or http://de.selfhtml.org/servercgi/server/htaccess.htm#fehlermeldungen
```
