```
### Smart.Framework sample .htaccess for Apache 2.2 / 2.4
### For the most basic version, just uncomment the 7 lines that start with the # as first
character.

php_value default_mimetype     text/html
php_value variables_order      GPCS
php_value request_order        GP
php_flag always_populate_raw_post_data  Off
php_value max_input_vars       1500
php_value max_input_nesting_level  5
php_value max_input_time       60
php_value output_buffering     0
#php_value output_buffering    4096
php_value post_max_size        108M
php_value upload_max_filesize   102M
php_flag session.auto_start    Off
php_value session.use_trans_sid    0
php_flag mail.add_x_header     Off
php_flag zend.enable_gc        On
php_flag zend.multibyte        Off

#<IfModule mod_rewrite.c>

  #v.160731#

  ###
#  RewriteEngine     On
  ###

  ### sample:  smart-framework/module.controller.html|.stml|.json [ compatible with
Smart::url_make_semantic() + Rewrite ]
  ##RewriteCond      %{QUERY_STRING} !^\/
#  RewriteCond       %{REQUEST_FILENAME} !-f
#  RewriteCond       %{REQUEST_FILENAME} !-d
#  RewriteRule       ^(.*)\.(html|stml|json)$     index.php?page=$1 [QSA,L]
  ###

  ### sample:  alternate URLs to use in combination with sub-domains (This is only for very
very advanced use ... !!!)
  ##RewriteCond      %{HTTP_HOST} ^([0-9a-z\-]*)\.
```

```
##### module.smart-framework/controller
##RewriteRule     ^(.*)?/?$                 index.php?page=$1.%1 [QSA,L]
##### module.smart-framework/controller
##RewriteRule     ^(.*)?/?$                 index.php?page=%1.$1 [QSA,L]
##### controller.smart-framework/module(.html|.stml|.json)
##RewriteRule     ^(.*)\.(html|stml|json)$     index.php?page=$1.%1 [QSA,L]
##### module.smart-framework/controller(.html|.stml|.json)
##RewriteRule     ^(.*)\.(html|stml|json)$     index.php?page=%1.$1 [QSA,L]
###

#</IfModule>

### END
```
