

```
AddType text/cache-manifest .manifest
```

```
# Firefox's appcache is extremely buggy. I don't really know what's wrong, but  
# somehow it is requesting resources when it shouldn't, and sometimes not  
# correctly invalidating the cache. Setting the following options magically  
# eliminates these problems while not killing the actual PURPOSE of the  
# appcache. Browsers who don't support the appcache probably get pretty slow  
# with this.
```

```
# https://bugzilla.mozilla.org/show\_bug.cgi?id=788197
```

```
Header set Pragma "no-cache"
```

```
Header set Cache-Control "no-cache"
```

```
ExpiresDefault "access"
```
