

```
# Use the front controller as index file. It serves as fallback solution when
# every other rewrite/redirect fails (e.g. in an aliased environment without
# mod_rewrite). Additionally, this reduces the matching process for the
# startpage (path "/") because otherwise Apache will apply the rewriting rules
# to each configured DirectoryIndex file (e.g. index.php, index.html, index.pl).
DirectoryIndex app.php
```

```
<IfModule mod_rewrite.c>
```

```
    RewriteEngine On
```

```
    # Redirect to HTTPS on all URLs
```

```
    RewriteCond %{HTTPS} !=on
```

```
    RewriteRule ^ https://%{HTTP_HOST}%{REQUEST_URI} [L,R=301]
```

```
    # php-cgi/fastcgi under Apache does not pass HTTP Basic user/pass to PHP by default
    # This workaround makes sure the HTTP_AUTHORIZATION environment variable gets
    # added when an Authorization header is present.
```

```
    RewriteCond %{HTTP:Authorization} ^(.+)$
```

```
    RewriteRule .* - [E=HTTP_AUTHORIZATION:%{HTTP:Authorization}]
```

```
    # Redirect to URI without front controller to prevent duplicate content
    # (with and without `/app.php`). Only do this redirect on the initial
    # rewrite by Apache and not on subsequent cycles. Otherwise we would get an
    # endless redirect loop (request -> rewrite to front controller ->
    # redirect -> request -> ...).
```

```
    # So in case you get a "too many redirects" error or you always get redirected
    # to the startpage because your Apache does not expose the REDIRECT_STATUS
    # environment variable, you have 2 choices:
```

```
    # - disable this feature by commenting the following 2 lines or
```

```
    # - use Apache >= 2.3.9 and replace all L flags by END flags and remove the
    #   following RewriteCond (best solution)
```

```
    RewriteCond %{ENV:REDIRECT_STATUS} ^$
```

```
    RewriteRule ^app\.php(/(.*)|)$ %{CONTEXT_PREFIX}/$2 [R=301,L]
```

```
    # If the requested filename exists, simply serve it.
```

```
    # We only want to let Apache serve files and not directories.
```

```
    RewriteCond %{REQUEST_FILENAME} -f
```

```
    RewriteRule .? - [L]
```

```
    # The following rewrites all other queries to the front controller. The
    # condition ensures that if you ever wish Apache allows to do some virtual
```

```
# condition ensures that if you are using Hpacne aliases to do mass virtual  
# hosting, the base path will be prepended to allow proper resolution of the  
# app.php file; it will work in non-aliased environments as well, providing  
# a safe, one-size fits all solution.
```

```
RewriteCond %(REQUEST_URI)::%1 ^(/.+)(.+):\2$
```

```
RewriteRule ^(.*) - [E=BASE:%1]
```

```
RewriteRule .? %(ENV:BASE)app.php [L]
```

```
</IfModule>
```

```
<IfModule !mod_rewrite.c>
```

```
<IfModule mod_alias.c>
```

```
# When mod_rewrite is not available, we instruct a temporary redirect of  
# the startpage to the front controller explicitly so that the website  
# and the generated links can still be used.
```

```
RedirectMatch 302 ^/$ /app.php/
```

```
# RedirectTemp cannot be used instead
```

```
</IfModule>
```

```
</IfModule>
