# BEGIN HTML5 Boilerplate
```

```
###
### This contains the HTML5 Boilerplate .htaccess that can be found at:
### github.com/h5bp/html5-boilerplate/blob/master/.htaccess
###
### Added:
### Block access to access to WordPress files that reveal version information.
###
### Commented out by default:
### Expires headers:          Use WP Super Cache or W3 Total Cache (unless using the H5BP build)
### ETag removal:           Use WP Super Cache or W3 Total Cache (unless using the H5BP build)
### Start rewrite engine:    Handled by WordPress
### Suppress/force www:     Handled by WordPress
### Options -MultiViews:    Causes a server 500 error on most shared hosts
### Custom 404 page:        Handled by WordPress
###
### Anytime you update this file the .htaccess file in the root of your
### WordPress install is automatically updated with the changes whenever
### the permalinks are flushed or set
###
